This catalogue lists only machinery officially imported or manufactured in the UK and is effective from February 2013 and supersedes all previous catalogues. Whilst every care is taken in compiling these lists of applications, they are given for general guidance only, and they do not constitute any contractual term, representation or warranty and as such NGK do not accept any responsibility in respect of any claim whatsoever and howsoever caused arising from the publication of this catalogue. The appropriate NGK Spark Plugs are designed solely for use in automotive, motorcycle, marine, horticultural, agricultural, commercial, industrial, and all stationary engines.

NGK Spark Plugs should not be used in aircraft engines.

Resistor plugs should always be used where they are recommended by the manufacturers. The use of non-resistor plugs, could, in some cases, result in damage to electronic components.

Applications listed in this catalogue do not apply to racing or modified engines, except where explicitly noted.

Now look at what NGK's superior copper core technology delivers.

- Perfect Ignition
- Better cold weather starting
- Better engine performance
- More complete combustion
- Better emissions and cleaner exhaust
- Wider heat range over all operating conditions

- CORRUGATIONS**
To prevent flash over
- SPECIAL PACKING**
Excellent air tightness.
Robust construction
- INSULATOR**
Made of high purity alumina
providing better heat dissipation,
higher electrical insulation and
stronger thermal shock resistance
- METAL SHELL**
Plated and chromated to guard
against corrosion
- COPPER CORE**
Deeply inserted in the centre
electrode for improved thermal
conductivity. Providing an ultra
wide heat range plug that gives
maximum performance at both
high and low speeds
- CENTRE & GROUND ELECTRODES**
Special nickel alloy ensures superior
resistance and durability

NGK. Pioneers of copper core spark plugs since 1958,
and now undisputed leaders in spark plug technology.

SOME PEOPLE SWEAR BY OTHER PLUGS

THE WORLD'S NO.1 SPARK PLUG

NGK WIDE RANGE SPARK PLUGS

WIDE HEAT RANGE

A wide range spark plug is more flexible and performs equally well in a hot or cold engine under stop and go city driving or fast motorway cruising. Engines that tend to run hot need cold type plugs. Those that run cold demand a hotter type. The specific plug for any engine is determined by the plug's heat range. That is the minimum and maximum temperatures between which the plug will offer optimum performance.

The heat range of NGK Spark Plugs is wider than ordinary plugs therefore they are suitable for both high speed and low speed driving. Compared with conventional plugs of the same pre-ignition rating they have more resistance to fouling. Compared to ordinary plugs with equal anti-fouling resistance, NGK Spark Plugs have a higher pre-ignition rating.

NGK'S HEART OF COPPER

Copper wire used in place of the iron core in conventional plugs is the secret of NGK's Wide Heat Range. Copper's superior heat conductivity dissipates heat quicker. It cools the electrode tip and insulator tip which prevents hot spots that could cause pre-ignition. Increased heat resistance does not affect fouling resistance, which is primarily determined by the insulator nose length. The longer the nose, the more susceptible it is to heat and the more free from fouling. By raising the pre-ignition rating with the high conduction copper and leaving the insulator nose long, NGK produces the Wide Range Plug. One that meets the broad thermal requirements of engines under high and low RPM conditions. With the exception of a couple of older applications all the spark plugs in this horticultural catalogue employ copper core technology.

FIRING END APPEARANCE

Firing end temperature °C		• Overheating The insulator is white and sometimes blistered. If the insulator temperature is over 870°C pre-ignition may occur. Engine power will be reduced and the piston may be damaged.	• Causes • Over advanced ignition timing • Too lean a fuel mixture • Blocked injectors • Insufficient cooling • Excessive deposits in the combustion chamber
Overheating area		• Good condition The insulator is brown or light grey.	Even if the spark plug is used under good conditions, deposits will accumulate. Regular inspection and replacement is advisable.
Optimum temperature area		• Fouling Carbon accumulates on the insulator nose forming a leakage path to earth. The engine misfires resulting in bad starting and poor acceleration. Particularly common with unleaded fuel.	• Causes • Too rich a fuel mixture • Excessive use of choke • Prolonged slow speed driving or idling • Blocked air filter • Spark plug heat range too cold
450°			
Fouling area	Idle Temp { 250° 150°		

SPARK PLUG INSTALLATION TIPS

- Refer to current NGK catalogue for correct spark plug selection
- Check condition and cleanliness of threads in cylinder head
- Ensure plug is gapped according to vehicle manufacturers specification (*fig 1*)
- Multi ground electrode and precious metal plugs should not be regapped - visual inspection only
- Install new spark plug *by hand* until it seats - (*fig 2*) a length of rubber tubing pushed over the insulator can be a useful aid for plug installation where access is difficult
- Tighten to specified torque setting as shown in the chart below (*fig 3*)
- If a torque wrench is unavailable then refer to vehicle/engine manufacturers installation instructions or the tightening angle advice which is displayed on current NGK packaging (excluding specialist race plugs). Note that this angle advice can differ between part numbers due to individual spark plug design (e.g. seating type, thread diameter and gasket material)
- It is important not to over or under tighten spark plugs during installation. Over-tightening can lead to distortion of the spark plug. Under-tightening can cause overheating due to poor heat dissipation. *In extreme cases incorrect tightening can cause spark plug breakage and/or engine damage*
- NGK does not recommend the application of lubricant to spark plug threads as the resultant reduction of frictional forces at the thread faces will render the torque charts inaccurate and over tightening could occur
- If a gasket type spark plug is re-installed, it should only require a further 1/12 of a turn after it has been seated
- Always carefully use the correct tools for removal/installation to prevent damage to the spark plug or engine
- Inspect spark plug cover and renew if necessary

③ FOR FLAT SEAT TYPE (WITH GASKET)						TAPER SEAT TYPE	
Thread Ø	18mm	14mm	12mm	10mm	8mm	18mm	14mm
Cast iron head	35-45Nm (3.5-4.5kgm) (25.3-32.5lbs ft)	25-35Nm (2.5-3.5kgm) (18.0-25.3lbs ft)	15-25Nm (1.5-2.5kgm) (10.8-18.0lbs ft)	10-15Nm (1.0-1.5kgm) (7.2-10.8lbs ft)	-	20-30Nm (2.0-3.0kgm) (14.5-21.6lbs ft)	15-25Nm (1.5-2.5kgm) (10.8-18.0lbs ft)
Aluminium head	35-40Nm (3.5-4.0kgm) (25.3-28.9lbs ft)	25-30Nm (2.5-3.0kgm) (18.0-21.6lbs ft)	15-20Nm (1.5-2.0kgm) (10.8-14.5lbs ft)	10-12Nm (1.0-1.2kgm) (7.2-8.7lbs ft)	8-10Nm (0.8-1.0kgm) (5.8-7.2lbs ft)	20-30Nm (2.0-3.0kgm) (14.5-21.6lbs ft)	10-20Nm (1.0-2.0kgm) (7.2-14.5lbs ft)

Important: Some spark plugs differ in gasket design or material, refer to tightening advice on specific spark plug packaging

SPARK PLUG GAP SETTINGS

Important: Spark plug gap settings are given in millimetres. Practical equivalents are shown below.

CONVERSION CHART (SPARK PLUGS)

IMPORTANT:

This chart is furnished as a guide only. Certain design differences may exist between our spark plugs and another manufacturers; heat ratings can also vary. Always refer to the main application data to select the recommended spark plug for specific engines.

NGK GLOW PLUG TYPES AND FEATURES

METAL SHEATHED GLOW PLUGS

Single coil types

Standard single coil glow plugs heat at a fairly uniform rate to its maximum temperature with a constant current consumption. Rapid Glow types have a single coil which changes its resistance as the temperature rises. This allows an initial high current draw to promote faster warm up, with a reduction in current draw as the temperature rises.

QGS Types

Quick Glow System glow plugs are available in single & double coil types. They both use a very low resistance heating coil to allow enormous current flow for a very fast heating time. These glow plugs require strict regulation to prevent damage and are only used with a specifically designed QGS controller.

SRM Types

Self-Regulating Metal glow plugs contain two coils. The heating coil at the tip of the probe provides the heat source; the second (regulating) coil allows an extremely fast warm up time to temperatures in excess of 900°C and once this temperature is reached can autonomously maintain a high final temperature allowing longer post heating times.

AQGS Types

Advanced Quick Glow System glow plugs reach 1000°C in 2 seconds and can maintain this high temperature for long-term post glow capability to promote cleaner vehicle emissions.

CERAMIC GLOW PLUGS

SRC Types

Self-Regulating Ceramic glow plugs reach temperatures in excess of 1000°C. With the use of ceramic, these glow plugs are afforded the greatest protection from the prolonged high temperatures involved with extended post glow heating periods.

QGS Types

Similar to the metal sheathed QGS types, but offers faster heat up times to greater temperatures, although still requires strict regulation with a specialist QGS controller.

NHTC Types

New High Temperature Ceramic glow plugs use the latest technology to allow extremely fast heat up times to eliminate the concept of pre-glow. They also have the ability to maintain post glow temperatures as high as 1350°C to further help vehicle manufacturers reduce engine emissions.

Double Coil Type

CORRECT USE OF GLOW PLUGS

It is essential that the correct voltage and current are used in line with the vehicle manufacturers recommendations. If the voltage or battery capacity is too low, the glow plug will not get hot enough and the vehicle may fail to start. If the voltage is too high the heating coil may melt or the glow plugs service life will be reduced.

The pre-heating time of glow plugs can vary significantly, dependant upon the technology of the glow plug in use. For example, standard type glow plugs may take 20 seconds to reach 800°C, whereas the latest ceramic types can reach in excess of 1000°C in 2 seconds.

If starting difficulties are experienced, continuous cranking or leaving the ignition switched on without the engine running can lead to premature failure of the glow plugs and draining of the battery. A better method is to switch the power off and retry the starting procedure after a short period of time.

Thread Diameter	Tightening Torque
8mm	8-15Nm (0.8-1.5Kgm)
9mm	7.65-9.35Nm (0.7-0.9Kgm)
10mm	15-20Nm (1.5-2.0Kgm)
12mm	20-25Nm (2.0-2.5Kgm)
14mm	20-25Nm (2.0-2.5Kgm)
18mm	20-30Nm (2.0-3.0Kgm)

Testing Sheathed Type Glow Plugs

In order to check the heating coil, measure its resistance as shown in the diagram (excluding double insulated, YD, CX type part numbers). Some resistance values are extremely low (such as some QGS types) and should only be tested with an Ohmmeter capable of recording values down to 0.1Ω. Testing glow plugs by connecting directly across a battery is NOT recommended as, apart from risk to personal injury, damage can occur to the internal construction of the glow plug if it is not designed to have continuous voltage applied (e.g. QGS types).

Resistance value ∞ : The heating coil is broken

Resistance value less than 5 Ω : The heating coil is in good condition

INTERPRETATION OF GLOW PLUG APPEARANCE

Appearance	Causes	Recommended Counter Measure
Melted Heater Tube	1. Abnormal Overheating a) Incorrect fuel injection timing or volume flow rate. b) Abnormal combustion due to excessive lubricating oil entering the combustion chamber. 2. Excessive Voltage a) Incorrect glow plug has been fitted. b) Faulty controller relay or glow plugs switched on too long.	a) Check fuel injection. b) Check valve guides and piston rings. a) Confirm glow plug part number is correct. b) Check controller relay operation.
Heating Coil Broken ∞ Resistance	a) See excessive voltage above. b) See carbon build up below.	
Broken Heater Tube	Excessive turbulence or overheating due to incorrect fuel injection timing or volume flow rate.	Check fuel injection timing and volume flow rate.
Shiny appearance on heater tube Swirl marks on heater tube Carbon build up at taper seat area	Build up of carbon surrounding glow plug heater tube in combustion chamber.	Ream excessive carbon from glow plug hole prior to fitment.

SPARK PLUG COVERS

STANDARD PLUG COVERS

EPDM RUBBER PLUG COVERS

The NGK range of resistor covers are designed to give perfect noise suppression across all frequencies whilst engine performance is not adversely affected whatsoever.

Featuring a resistor element pressed in between the plug terminal and the high tension wire connection, the construction is extremely durable, the resistor element is long enough to prevent interior flashover, and steady resistance is maintained. Superlative ceramic materials are incorporated that resist deterioration and have small resistance variation under over-load, whilst the plug connector is made of sturdy phenolic resin, practically oblivious to tremendous heat and high tension, and very rugged rubber material. The heat press insertion makes the construction all the more tough and vibration-resistant. Special rubber liners on both ends prevent moisture from causing electrical leakage.

All motorcycle manufacturers now comply with current legislation which demands a standard of noise suppression on every vehicle. This is achieved usually by fitting NGK resistor covers though in many cases a combination of NGK resistor covers and NGK resistor spark plugs (R type) is necessary to satisfy the ministry tests. It is emphasized that despite the use of both resistor covers and spark plugs in such engines, due to the unique and superior construction of NGK products there is no loss of performance or shortening of service life.

LBO5EMH and SDO5FM being of tough EPDM rubber construction are intended for competition/trial applications.

SPARK PLUG COVERS

Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
LB05E	8031	Black	5 kΩ	14mm	
LB05E-R	8898	Red	5 kΩ	14mm	
LB05F	8051	Black	5 kΩ	14mm	
LB05F-R	8854	Red	5 kΩ	14mm	

Description: 90° Elbow Type

Description: Straight Type

Material: Phenolic Resin

COVER SYMBOLS EXPLANATION CHART

L

B

10

E

H

F

	External appearance
L	90° Elbow Type
S	Straight
X	102° Elbow Std.
V	120° Elbow (Long)
Y	120° Elbow (Short)
T	'T' Type

	Resistance
None	Non-resistor
01	1 k Ω
05	5 k Ω
10	10 k Ω

	Suitable Ø Plug Thread
B	14 mm minimum
C	10 mm minimum
D	10 & 12 mm
Z	10, 12 & 14 mm

	Suitable Terminal Type
E	Terminal nut or solid post
F	Terminal stud

	Special Feature
A	Special design
H	Compact type
P	Special waterproof cover
K	Silicon waterproof cover
M	Rubber sheathed
G	With rubber grommet
W	Double connector springs
F	For Ø 5mm HT cable
L	Inductive resistor type
Y	With handle
Z	Special design

NGK RESISTOR PLUG COVERS
